

## Business Phone Solutions from

### Are your communication systems an asset or a business risk?

In our many years of servicing and providing communications systems to businesses, we often come across very old, unsupported and unserviceable systems still in operation, and would like to ask you these questions:

**Can you survive without your communications?**

**If it broke tomorrow, what impact would this have on your business?**

**Would you like us to show you ways you can modernise your communications or how to mitigate risks?**

We are offering a \$50 flat fee health checkup of your current systems, with no-obligation recommendations and solutions to help you modernise and maximise their potential. Let us help you to stay in contact with your customers and make sure you have minimal disruptions to your communications.

We offer a range of solutions but can tailor our offerings based on your exact needs.

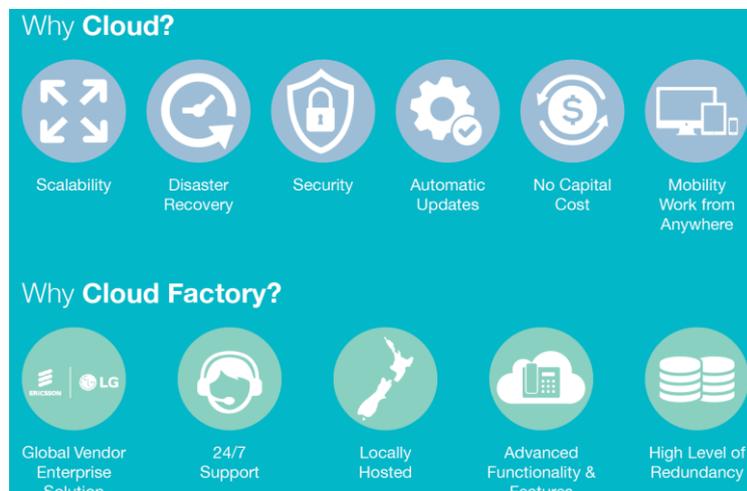

**Offer 1: Cloud based PABX system – see [www.cloud-factory.co.nz](http://www.cloud-factory.co.nz)**

Communications Specialists is proud to offer the New Zealand market a built for business Cloud Voice Solution called Cloud Factory. It is designed to empower businesses with a truly feature-rich and highly reliable Cloud Voice solution.

Making the decision to move your telephony service into the Cloud provides businesses with many benefits including a more efficient workforce, a flexible working environment and future-proofed growth partnership.

There is no commitment to a certain number of voice channels either, any voice connected handset will always have a line available. Our Voice solution will provide each business user a state of the art IP Deskphone, feature-rich PBX functionality, fantastic calling rates and a high quality business grade telephony service manageable via an online portal.

How it works: We preset up your IP phones based on your requirements, number of buttons, mobile extension (calls can ring on your mobile simultaneously or when you're out of office). This preset phone is then delivered to your premise by our technicians. We plug into one of your Ethernet ports, and around 51 seconds later you have a working phone, a local DDI, your personal login to change your buttons or call flows, and full remote support. All you need is the same Ethernet port your PC is plugged into, and VDSL or Fibre internet. It's that easy!

**Why Cloud?**

- Scalability
- Disaster Recovery
- Security
- Automatic Updates
- No Capital Cost
- Mobility Work from Anywhere

**Why Cloud Factory?**

- Global Vendor Enterprise Solution
- 24/7 Support
- Locally Hosted
- Advanced Functionality & Features
- High Level of Redundancy

Whether you are a small business looking to grow, a large business looking to streamline or a multi-site business wanting to operate as a single site, Cloud Factory has a purpose built solution to fit.

## Not ready to move to the cloud?

We have a range of on-site PABX solutions to fit you!

Small Office/Hotel/Motel – Ericsson-LG EMG80 Phone System

Larger Office/Hotel/Motel needing IP telephony and UC features – UCP100

Large or multi-site Office/Organisation needing IP telephony and UC features – UCP600

The EMG80 is one of our most popular models, as it fits most small business requirements. It comes with 8 ports for analogue or digital phones, and can be customised to support up to 32 as well as IP phones. At around \$2900 for a base unit installation (changing depending on the number and type of phones needed), this is a great option.

For a larger organisation, the UCP100 comes into it's own, with up to 199 ports, and supporting up to 50 IP phones out of the box. This feature rich call server can be customised for any combination of analogue, digital or IP phones, and is running the latest iPECS UC software, giving access to advanced features like Mobile UC clients, voicemail to email, remote phones, and integration into Lync and Skype for business with it's range of IP software clients.

For a truly large organisation, the UCP600 has the capability to expand up to 600 ports by license, and features all of the rich customisation and options as the UCP100 on a much larger scale.

### Easy & Economical UC

The iPECS UCP call server has UCS standard built-in. You can utilise video, IM, audio conference, visual voicemail and voice calls on one platform. As an external server the iPECS UCS Premium server can also provide various collaboration features.

### Increase Reliability with Distributed Architecture

Geographical/server redundancy and T-Net features provide high reliability and makes management very easy for both local and remote offices.

### Anytime & Anywhere Connectivity

iPECS UCS optimises Mobile Client, Mobile Extension, DECT, and Wi-Fi terminals. Mobile communications are available both in and out of the office.

### Improve Business Performance

iPECS CCS, IPCCR, Attendant, NMS, Voicemail, Click Call and Skype for Business are all optimised. These applications enable users to build their own unified communications solution to suit their business.

### Simple Installation & Management

Adopts advanced HTML5 based Web admin which is an intuitive simple solution to system configuration and maintenance. The Web Manager Install Wizard presents the basic installation in a series of simple steps.

### Efficient Investment

You can simply expand your capacity with license options. Invest in additional licenses as your business grows.
